## New Data and Reports: 2017-2018 Flu Surveillance Report

#### Kansas Influenza Surveillance, 2017-2018

#### Introduction

Influenza is not a nationally notifiable disease, nor is it a notifiable disease in Kansas. Because patient-level data is not reported to state health departments or to the Centers for Disease Control and Prevention (CDC), the burden of disease must be tracked through non-traditional methods. Influenza surveillance in Kansas consists of seven components that provide data on outpatient influenza-like illness (ILI), influenza viruses, influenza-associated deaths, and outbreaks.

Morbidity Surveillance from the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet)

The U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet) is a collaboration between CDC and state, local, and territorial health departments. The purpose of this surveillance is to track ILI, recognize trends in influenza transmission, determine the

Chronic Disease Self-Management Program October 11, 12, 17, 18, 2018 abetes Self-Management Program October 19, 2018

#### Self-Management Education \_

The self-management education workshops series is offered 2.5 hours, once a week, for six weeks in locations that can include provider offices and community settings. Health consumers, their family members and/or caregivers attend the program together. Workshops are facilitated by two trained leaders, one or both of whom have a chronic condition. Sessions are highly participative, where mutual support and success builds participants confidence in their ability to manage their health and maintain active and fulfilling lives.

#### \_Works With Existing Treatment Plans

The workshop series will not conflict with existing programs or treatment. It is designed to enhance regular treatment and disease-specific education. Many health consumers have more than one chronic condition and this program is especially helpful for these consumers, as it gives them the skills to coordinate all the things needed to manage their health and to keen them arrips in their lives.

#### Program Development

This evidence-based workshop is part of the Self-Management Programs developed by Stanford University's Division of Family & Community Medicine, School of Medicine. This group has over 30 years of experience developing and evaluating programs tested for effectiveness. For more information on the evidence behind the program, visit

#### \_Get Involved

There are several ways to promote self-management education in your community. Anyone can become carrified by attending the four-days training, the will supply everything needed for facilitate a workshop, including training, support, books, cfs, and workshop supplies at no cost to you or your organization.
